### CONSULTANTS:

Dr. Vijaisimha, MD & DNB (Radiotherapy), DM (Medical Oncology)  
Dr. Guruprasad C Shenoy MD general medicine, DNB general medicine, DM medical oncology.

### DIAGNOSIS:

CARCINOMA RIGHT BREAST, NST GRADE 2, TRIPLE POSITIVE FOR CYCLE 1 NEOADJUVANT CHEMOTHERAPY (TCHP REGIMEN).

CHIEF COMPLAINTS: Nil.

HISTORY OF PRESENTING ILLNESS: Ms. Zarina Begum R, aged 44 years, was evaluated elsewhere for complaint of lump in the right breast noticed 2 months back. Bilateral digital mammography (19-02-26), showed irregular shaped hypoechoic lesion in the right breast suspicious for neoplastic process. Left breast - a well-defined oval small lesion in the left breast as described; likely fibroadenoma BIRADS II- Benign. Histopathology – Right breast lump core biopsy (26-02-2026), suggestive of malignancy. Invasive Ductal Carcinoma NOS. Block reviewed at Neuberg Anand (02-03-2026) : Positive for malignancy- Invasive carcinoma, no special type. PET CT (09.03.26) : Hypermetabolic primary neoplasm in the upper outer quadrant of the right breast, characterized by an irregular, heterogeneously enhancing soft tissue mass with central necrosis, abutting the pectoralis major muscle. Presence of a hypermetabolic satellite nodule supero-medial to the primary right breast lesion. Non-FDG avid oval lesion in the left breast, metabolically consistent with a benign etiology. Mildly FDG-avid discrete and conglomerate para-aortic and aortocaval lymphadenopathy; given the metabolic profile and distribution, these are likely inflammatory/reactive in nature. No FDG-avid axillary, mediastinal, or distant lymphadenopathy identified. No PET-CT evidence of distant visceral or skeletal metastasis in the current staging evaluation . She presented here for further management. Blocks review done on 05.03.2026, showed scant breast tissue with hyalinized stroma and no evidence of malignancy, block review of 'right' breast trucut biopsy. Underwent core needle biopsy from the right breast lump. Histopathology (10.03.2026), showed invasive breast carcinoma NST, grade 2. IHC - ER 40% 6/8, PR – 70%, 7/8, Her2neu – 3+ 85% positive, Ki67 – 35. She is planned for neoadjuvant chemotherapy with TCHP regimen (Doxeacqualip 110mg + Inj. Carboplatin 500mg + Inj. Trastuzumab (Vivitra) 440mg f/b 330mg + Inj. Pertuzumab (Pertuza) 840mg f/b 420mg) x 3 weekly once for 6 cycles followed by assessment for surgery. She is now admitted for cycle 1 neoadjuvant chemotherapy.
