Anti CMV IgG Antibodies , SERUM

 Colors Indicate: **Abnormal** **Borderline** **Normal**

Test Name	20 Aug 2025 12:42	Units	Biological Reference Interval
Anti CMV IgG Antibodies	47	UA/ml	Interpretation:- Negative: < 4 Equivocal: >= 4 to < 6 Positive: >= 6
Positive Comment: Samples collected very early in the acute stage of disease may have negative result. The result of a single specimen should not be used to aid in the diagnosis of recent infection. Paired samples should be tested for sero-conversion which may be indicative of primary or recent infection. [Method: Enzyme Linked Fluorescence Assay]			

Please Note

1. Test results are to be clinically correlated.
2. Storage and discard of biological specimen/materials shall be as per Medanta's specimen retention policy.
3. The biological specimen/ materials may be used for educational and research purposes.
4. Test results are not valid for medico-legal purposes.
5. In case of any query related to the test results, please contact [+91124-4834542].
